DRYWALL APPLICATIONS

Half-inch drywall (12.5mm) is the standard for interior walls and ceilings in residential homes.

In the world of interior design, drywall is the unassuming artist, effortlessly shaping spaces with its versatility. Like a blank canvas, it adapts to form partitions and surfaces, providing a smooth backdrop for the stories of daily life.

Drywall is not just a surface; it's a quiet artist, ready to embrace the personal touches and expressions that turn a space into a home.
